REMARKS/ARGUMENTS

Claims 1-10, 12-19, 25-34, 36-43, and 49-55 are pending in this application.

Claims 11 and 35 were cancelled. Claims 1, 12, 25, and 36 were amended and new claims 49-55 were added to more distinctly claim the invention. Support for the new and amended claims can be found in the specification. No new matter has been added.

Double Patenting

Claims 1-19 and 25-43 stand rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-50 of U.S. Patent No. 6,420,108. U.S. Patent No. 6,420,108 was issued from U.S. Application Serial No. 09/020,743, and the above identified application is a continuation application of the same U.S. Application Serial No. 09/020,743. As suggested by the Examiner, these rejections can be overcome by filing a terminal disclaimer. In response, applicants will file a terminal disclaimer when other issues of patentability related to the above identified application are resolved.

Claim Rejections Under 35 U.S.C. §§ 102 and 103

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Zhao et al. Claims 25-29 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Zhao et al. Claim 19 and 43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zhao et al. Claims 6-18 and 30-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lockhart et al in view of Zhao et al.

In response to these rejections, Applicants have amended or canceled some claims. The amended independent claims 1 and 25 recite, among others, processes or instructions for receiving an input of selection of the first mark and in response to the input displaying information associated with the first expressed sequence. In contrast, neither Zhao nor Lockhart, either alone or in combination, does not disclose, teach or suggest any process or instruction for receiving an input of selection of the first mark and in response to the input displaying information associated with the first expressed sequence.

Zhao discloses a method for analyzing large numbers of cDNA plasmids from brain tissue. The Zhao method includes preparing a filter using cDNA plasmids isolated from a brain tissue sample. Zhao purified the plasmids and grided them onto a nylon membrane filter using a robot. Then, Zhao constructed probes on the filter from purified poly(A)+ RNA, again from brain tissue. Zhao then hybridized tissue samples with the filter. Then, using a Bioimaging Analyzer and an automatic quantification program, Zhao analyzed the amount of radioactivity existing at each of the probes and performed a data analysis as illustrated by a series of graphs in Fig. 3, page 211. Finally, Zhao performed sequence analysis for clones of interest. Thus, at the time of producing the graph, Zhao did not know the sequence or other characteristics of the cDNA sequences used as probes. It is after he has displayed expression levels in the graph that he proposes to conduct experiments to determine the sequence of particular probes. Zhao does not disclose, teach or suggest any process or instruction for receiving an input of selection of the first mark and in response to the input displaying information associated with the first expressed sequence.

In addition, Lockhart does not teach presenting expression level information by displaying on a first axis representing the expression level in a first sample, displaying on a second axis representing the expression level in a second sample and displaying a mark relative to the two axes. Office Action, dated July 15, 2003, page 8. Further, the Lockhart does not disclose, teach or suggest any process or instruction for receiving an input of selection of the first mark and in response to the input displaying information associated with the first expressed sequence.

Therefore neither Zhao nor Lockhart, alone or in combination, disclose, teach, or suggest any process or instruction for receiving an input of selection of the first mark and in response to the input displaying information associated with the first expressed sequence, as recited in independent claims 1 and 25 and their dependent claims. Therefore the rejections under 35 U.S.C. §§ 102 and 103 have been overcome.

New Claims

New claims 49-55 have been added to more distinctly claim the invention. Applicants respectfully submit that neither Zhao nor Lockhart, alone or in combination, disclose, among others, receiving an input of selection of the first mark, in response to the input displaying information associated with the first expressed sequence, or in response to at least the input retrieving information associated with the first expressed sequence. Additionally, neither Zhao nor Lockhart, alone or in combination, disclose, among others, generating a sound associated with the first mark, the sound indicative of a second expression level for the first expressed sequence.

Hence the new claims 49-55 should be allowed.

Other Issues

On Information Disclosure Statements Paper Nos. 1 and 6, the Examiner indicated "date considered" to be "1/12/03," but did not initial any references on at least two pages of the Information Disclosure Statements (see Appendix for these two sheets). Applicants respectively request the Examiner initial these references considered by the Examiner so that a clear record of prosecution history may be maintained.

CONCLUSION

In view of the foregoing, Applicants believe all claims now pending in this Application are in condition for allowance. The issuance of a formal Notice of Allowance at an early date is respectfully requested.

If the Examiner believes a telephone conference would expedite prosecution of this application, please telephone the undersigned at 650-326-2400.

Respectfully submitted,

Daniel Mao Reg. No. 51,995
